

**This catalog contains seven sections**

- **General Information**
- **Multiconductor Cables**
- **Multipair Cables**
- **Commercial Data Cables**
- **Industrial Ethernet Cables**
- **Special Constructions**
- **Technical Information**

Tab sheets are provided for easy access to each section, and each tab is printed with a table of contents for that section. This will allow you to quickly search for specific cable applications. Each product section contains pages of part numbers that are similar in construction and application. Therefore, you may make quick product decisions.

If you know a specific Quabbin part number, you may locate it by referencing the **Part Number/Description/Locator** in this section. If you do not know a part number and wish to locate a specific construction, you should use the **Cable Finder** in this section. In addition, this General Information section also contains an explanation of the differences between actual, nominal, and minimum/maximum values on Page 2-A. Page 4-A details Quabbin's quality process and system.

### **Quabbin's Web Site**

Quabbin Wire & Cable's web site is described on page 3-A. It is an electronic version of this catalog but it also contains volumes of additional technical data and application information. You will find complete product specifications, actual test reports, new product announcements, technical white papers, pdf versions of various brochures, and background information on Quabbin Wire.

From the web you may view or down-load a searchable pdf version of this catalog, or you may request a disk version from Quabbin's sales service department.

Quabbin occasionally receives questions from customers regarding the accuracy and consistency of published catalog data. These questions are usually due to inconsistent definitions of terminology for measurement terms. Below is a brief explanation of the nature of specifications and test data. The differences between *actual* test results, *nominal* values and *minimums* or *maximums* are discussed. Quabbin's right to change specifications and the possibility that some data may contain errors is also explained.

### Specifications and Measured Values

All manufacturers realize that there will be some degree of variation in their product and in actual test values. If you performed any specific test on 20 random samples of the same cable, you would get 20 different "*actual*" values. A few test values would be relatively high, a few relatively low, and the rest clustered around some average or midpoint. This midpoint is generally referred to as the "*nominal*" value. Most technical specification data in this catalog should be considered to be nominal values; that is, some samples may vary above and some may vary below the published value.

A cable application that has a very specific test or measurement requirement (for example, a maximum diameter to fit within a connector) should be referred to Quabbin's sales or engineering departments. All *maximum* or *minimum* allowable requirements should be discussed to assure the normal product variation from the nominal value is acceptable.

This catalog also contains detailed information on individual part number listings and ratings for various industry requirements. Most people do not realize that UL, CSA, ICEA or other industry specifications usually set *minimum* performance requirements. For instance, consider a dielectric voltage breakdown test requirement of 1500 volts. A sample insulated wire that fails at 1490 volts is similar to a sample that fails at 50 volts. Both have failed the requirement. Conversely, a wire that passes 1500 volts but would fail at 1520 volts is as acceptable as one that would pass at 2500 volts. Both wires pass the minimum requirement, but obviously one provides much more safety margin in performance.

Quabbin Wire & Cable prides itself on the high performance margin of its products. You will see that many part numbers have dual or multiple ratings. Many of the electronic cables pass both the minimum fire resistant requirements (CL2, CM, CMR, etc.) and also have an appliance style listing (AWM). This combination

ensures that the cables are designed to exceed minimum requirements. Thus many Quabbin products both meet the minimum safety requirements, and can also be used in an OEM appliance or equivalent application.

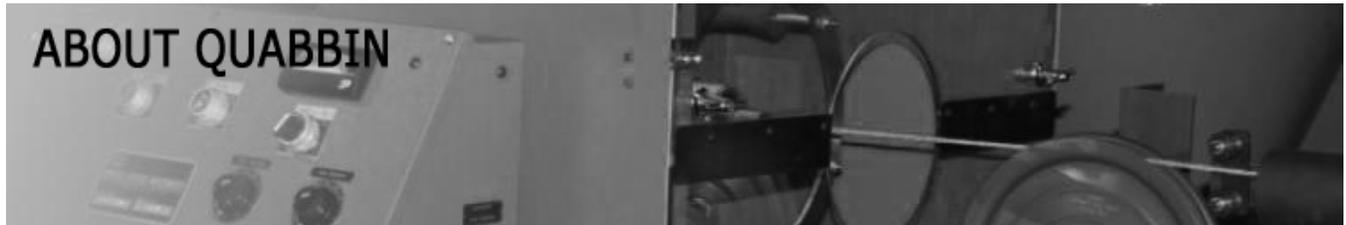

### Changes in Specifications

Quabbin Wire & Cable's product line has expanded and changed over the years, both to meet our customer's applications and to comply with ongoing UL/CSA/NEC modifications. We have made every attempt to make this catalog, and the product data within it, as accurate and complete as possible. However, electronic wire and cable is a complex product and new user and specification requirements are certain to continue to evolve. Therefore, if you have any special requests for additional technical information or unlisted items, please call your local sales representative or our sales service department. Quabbin Wire & Cable reserves the right to change or delete both product and specification data as required without notice.

### Disclaimer, RoHS, and Errors

We believe the information presented in this catalog is reliable and have carefully compiled and checked it. However, we assume no responsibility for possible errors or omissions. RoHS compliance has been determined by testing our materials and compounds using independent labs we believe are reliable. Since Quabbin did not perform these measurements, all compliance information is provided without warranty as indicated below.

Because each application is unique, Quabbin Wire & Cable makes no warranty as to the **merchantability** or suitability of any product for a particular use, nor will we be liable for any indirect, incidental or consequential damages that may arise from the use or sale of our product.

Quabbin Wire & Cable views the Internet and its pages on the World Wide Web as a vital sales, marketing and engineering tool. Quabbin's Web site ([www.quabbin.com](http://www.quabbin.com)) provides online information on the Company, its products, the markets served, and various applications.

One of our Web site's most valuable resources is the online catalog. As you use it, you will realize it provides much more than the paper catalog. It offers a wealth of detail on product features, including electronic performance test data.

Thanks to easy Web site access, product users can immediately access new product information and existing product changes as soon as they are posted rather than wait for a new catalog to be printed. In the same way, articles about industry trends, new specifications and technological advancements are available on Quabbin's site. Please visit [www.quabbin.com](http://www.quabbin.com). In the opinion of many, it is one of the best web sites in the industry.

The site is, first and foremost, an engineering tool providing technical data and specification information on over 500 part numbers. This information is accessible through the **Cable Finder**, which leads the user to one of five choices:

- Use a Quabbin P/N
- Provide an equal to a competitive P/N
- Describe your cable design
- Describe your cable application
- Discuss the application directly with Quabbin

These selections ultimately lead to specific part number information or a new cable design. The high performance and data networking designs often include typical test results for attenuation, NEXT, SRL, impedance, etc. that may be printed. You may also request a detailed engineering specification in pdf format, directly from the part number pages.

**Contact Us** leads you to Quabbin Wire & Cable's Massachusetts headquarters, field warehouses, or the Quabbin Rep's sales office nearest you. Phone, fax, e-mail, URL addresses and the names of sales personnel are provided. You can easily request samples, check availability and call for a quotation. E-mail links are also available for direct communication with Quabbin's Engineering and Human Resources departments.

**About Quabbin** provides information on the Company's size, manufacturing capabilities, product range, mission, and quality goals.

**Literature** leads to a series of articles on applications such as patch cables, Industrial Ethernet, LAN channel performance, alien crosstalk, return loss, T-1 signaling and much more. These articles do a good job of making a technical subject quite understandable and customers often use them for training purposes. You may also read and print individual brochures or a Stock List, provided in pdf format. The Literature section also contains new product and news releases. These include color product photos and direct links to applicable part numbers.

### **QUALITY POLICY**

Quabbin Wire & Cable Co., Inc. is dedicated to designing, manufacturing and selling consistently high quality products. To ensure that our products and service meet our customers' requirements, our quality objectives are:

- to exceed industry and performance standards
- to employ vendors who share our commitment to quality
- to ensure employee understanding and support of our quality system

Commitment, teamwork and dedication to quality are leading Quabbin Wire & Cable Co., Inc. to a future of growth and prosperity.

Paul D. Engel, President

When Paul Engel founded Quabbin Wire & Cable in 1975, quality was a driving force for the company. Through the years as Quabbin completed many expansions and upgrades to the facility, quality has remained a major factor. State-of-the-art process monitoring and automated data gathering are now the norm and not only ensure quality, but consistency. The end result is a product that the team is proud to stand behind.

The decision to choose Quabbin reflects much more than selecting a reel of cable. Along with the product, Quabbin customers benefit from an uncompromising vision of quality and a commitment to perform above industry standards. This philosophy is an integral part of the Quabbin corporate culture extending to the level of sales service provided, the technical and engineering support customers receive, respect and consideration for employees, as well as the desire to impact the local community and environment in a positive manner.

**a** = Capacitance between conductors.

**b** = Capacitance between 1 conductor and other conductors connected to shield.

\* Quabbin may substitute CSA Type CMG or C(UL) in the future.

# MULTICONDUCTOR CABLE

## DOUBLE SHIELD LOW CAP FOAM 24 AWG

**Application:** Low Capacitance Computer Interconnect, RS-423, RS-232, and CAD/CAM Cable, RoHS compliant

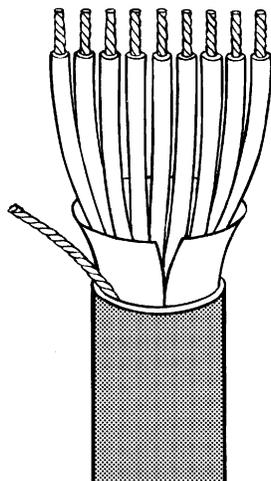

**Construction:** 24 AWG (7/32) tinned copper, insulated with foamed polypropylene. Conductors cabled and shielded with overall aluminum/polyester tape and 65% coverage tinned copper braid. 24 AWG stranded tinned copper drain wire and chrome gray PVC jacket

**Listing/Ratings:** (UL) AWM Style 2919, 30 Volt 80°C  
 NEC Type CM  
 Velocity of propagation 78%

\* CSA 300 Volt, 90°C

\*\* CSA 600 Volt, 105°C

\*\*\* This part number is not CSA certified.

\*\*\*\* Quabbin may substitute CSA Type CMG or C(UL) in the future.

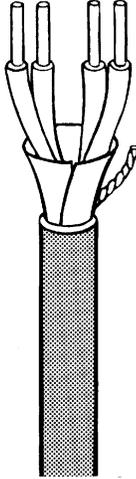

**Application:** Instrumentation, Audio, and Control Cable..  
RoHS compliant

**Construction:** 20 AWG (7/28) tinned copper insulated with PVC. Conductors cabled and jacketed with chrome gray PVC, except P/N 6101 has a black jacket.

**Listing/Ratings:** (UL) AWM Style 2464, 300 Volt 80°C  
CSA AWM I/II A/B FT4, 300 Volt 80°C\*

# MULTICONDUCTOR CABLE

## BRAIDED SHIELD 22 AWG

**Application:** Audio, Instrumentation and Communication Cable. RoHS compliant.

**Construction:** 22 AWG tinned copper as listed below, insulated with PVC. Conductors twisted with clear polyester tape and shielded with overall tinned copper braid. Part number 7335 has a solid copper drain wire. PVC jacket colored as specified below.

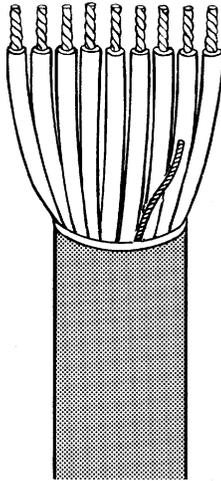

**Listing/Ratings:** (UL) AWM Style 2095, 300 Volt 80°C

**a** = Capacitance between conductors.

**b** = Capacitance between 1 conductor and other conductors connected to shield.

\* Quabbin may substitute CSA Type CMG or C(UL) in the future.

# MULTICONDUCTOR CABLE

## UNSHIELDED 16 & 18 AWG

**Application:** Power Limited Fire Alarm or Circuit Cable.  
 Consult Quabbin for RoHS information.

**Construction:** Solid bare copper as listed below, insulated with polythylene. Conductors cabled and jacketed with red PVC.

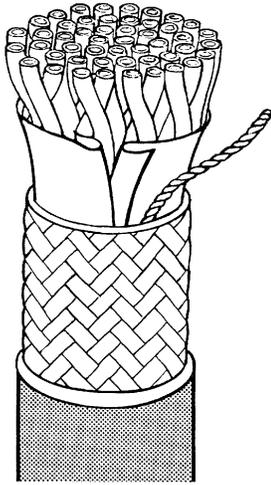

**Listing/Ratings:** CEC CMG\*  
 NEC Type CM, 300 Volt

Part Number	No. of Cond.	AWG Strand	Insulation Thickness		Jacket Thickness		Nominal Diameter		Nom. Cap. Mutual pF/ft	Color Code	1M' Pkg Weight Lbs.

**a** = Capacitance between conductors.

**b** = Capacitance between 1 conductor and other conductors connected to shield.

**Circuit Identification:** Each pair red/black. Pair jackets alternated red and black with numbers imprinted.

# MULTIPAIR CABLE PAIRS SHIELDED 22 AWG

**Application:** Point of Sale, Control and Computer Interconnect Cable. RoHS compliant

**Construction:** 22 AWG (7/30) tinned copper insulated with polypropylene and paired. Each pair shielded with aluminum/polyester tape and drain wire. Part number 7395 has common stranded tinned copper drain wire with pairs cabled on common axis. Part number 7400 has individual drain wires with pairs cabled. Both jacketed with chrome gray PVC

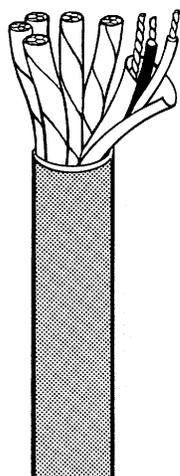

**Listing/Ratings:** P/N 7395: CEC CM\*

### SECTION D CONTENTS

Shielded 1-Pair Thru 12-Pair, 100 Ohm T-1, DS-1, xDSL	1-D, 2-D, 3-D, 4-D, 5-D
Shielded 2-Pair Thru 12-Pair, 120 Ohm E-1	6-D, 7-D
75 Ohm DS-3 Coax	8-D, 9-D, 10-D
Shielded IBM Type 6	11-D
Unshielded Category 3 Patch	12-D
Unshielded Category 5 Patch, Shielded Category 5 Horizontal	13-D, 14-D
Unshielded 2-Pair Patch for 10Base-T, 100Base-T, xDSL, ATM	15-D
Unshielded and Shielded Category 5e Patch. Tested to 100 MHz	16-D, 17-D
Double Shielded (SF/UTP) Category 5e Patch. Tested To 100 MHz	18-D
Low Smoke Zero Halogen Shielded and Unshielded, 4-Pair Category 5e and 6 Patch	19-D, 23-D, 26-D
Unshielded 100 Ohm Single Pair, Category 5e Cross-Connect, Digital Audio	20-D
Unshielded 4-Pair Category 5e Patch and Horizontal Tested to 350 MHz	21-D, 22-D
Unshielded 4-Pair Category 6 Patch and Horizontal. Patch Tested to 600 MHz	24-D, 25-D, 27-D
Shielded (F/UTP) Category 6 Patch. Tested To 250 MHz	28-D
Unshielded and Shielded 4-Pair Double Jacketed Augmented Category 6A Patch	29-D, 30-D, 31-D, 32-D

**Application:** Interconnect cable for T-1 (DS-1) and XDSL circuits. The 22 AWG cables reduce emissions for NEBS and FCC system testing. Legs terminate to eight position shielded or unshielded modular connectors when outer insulation layer is removed.\* RoHS compliant. (Refer to page 2-D for premise installation demarc extension cable.)

**Construction:** Two pair tinned copper with 2-layer composite insulation. Each pair individually shielded with aluminum/polyester tape (aluminum out) with a solid, tinned copper drain. Shields isolated and cable covered with PVC (CMR) or PVDF (CMP) oval jacket. 4-pair color code per Table G. 2-pair blue x white, orange x white

**Listing/Ratings:** NEC type and CEC listed below  
 Nom. impedance: 100 ohms +/- 10% @ 1 MHz  
 Velocity of propagation: 71%  
 Nominal Mutual capacitance: 15 pf/ft  
 ANSI T1.403 and T1.102 compliant to 200 meters\*\*

### ATTENUATION CHART\*\*

Frequency (MHz)	Attenuation (db/1000 ft)		
	22 AWG	24 AWG	26 AWG
.772	-5.5	-6.6	-8.25
1.544	-7.7	-8.7	-11.6
3.152	-10.9	-12.3	-16.4

\*Diameter over inner insulation layer is 0.034"-0.038" (0.86-0.91 mm).

\*\*Due to increased attenuation of 24 AWG, maximum effective distance for T-1 transmission is 160 meters and 26 AWG construction is used in patching applications.

**Application:** Interconnect cable for T-1 (DS-1) circuits. These double shielded designs reduce emissions for NEBS and FCC system testing. P/N 9701 will terminate to shielded or unshielded modular connectors when outer insulation layer is removed.\* P/N 6204 will not. RoHS compliant

**Construction:** Solid tinned copper as listed below. 9701 insulated with 2-layer composite polyolefin, 6204 with single layer polyethylene. Single pair cabled with fillers as required and a double overall shield. P/N 9701 shield as shown with aluminum/polyester tape (drain wire out) and an overall 36 AWG braid. P/N 6204 shielded with two 34 AWG braids and a drain wire between braids. Beige PVC jacket

**Listing/Ratings:** NEC type and CEC listed below  
 Nom. impedance: 100 ohms @ 1 MHz  
 Temperature rating 60°C Max.  
 Nom. mutual capac.: 9701 15 pf/ft, 6204 16 pF/ft.  
 ANSI T1.403 and T1.102 compliant to 200 meters\*\*

### CONDUCTOR COLOR CODE

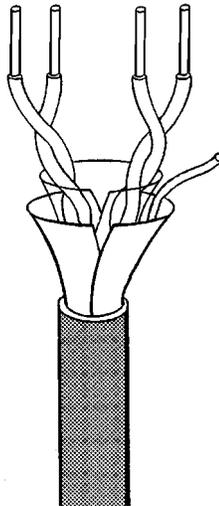

Pair	P/N 6204	P/N 9701
1	Blue/White X White/Blue	Blue X White/Blue

\*Diameter over inner insulation layer is 0.034"-0.038" (0.86-0.91 mm).

\*\*Due to increased attenuation of 24 AWG, maximum effective distance for T-1 transmission is 160 meters.

P/N 9719

P/N 6206

**Application:**

Interconnect cable for extending T-1 (DS-1) or XDSL circuits from the Telco demarc into the LAN or premise. Cables transmit ANSI T1-403 T-1 pulse, connecting to CSU, DSU, IAD, or routers. Will terminate to modular connectors (remove outer insulation layer for 9719). RoHS compliant. (Refer to page 1-D for Central Office application T-1 cable.)

**Construction:**

Two pair solid tinned copper with AWG shown below, insulated with polyolefin. 9719 pair have individual isolated aluminum/polyester tape shields (aluminum out) with solid, tinned copper drain wires. 6206 pair have overall polyester wrap and aluminum/polyester tape shield (aluminum in) with a solid, tinned copper drain. Both are jacketed with gray PVC. 9719 is oval, 6206 is round. Pair color code per Table G

\*Diameter over inner insulation layer is 0.034"-0.038" (0.86-0.91 mm).

\*\*Due to increased attenuation of 24 AWG, maximum effective distance for T-1 transmission is 160 meters.

**Application:** Dual or shotgun style interconnect cable suitable for T-1 (DS-1) and XDSL circuits. Properly terminated, P/N 9745 significantly reduces emissions and enhances performance for NEBS and FCC emissions testing in a system. RoHS compliant. Legs will terminate to eight position shielded or unshielded modular connectors when the outer insulation layer is removed.\*/ \*\*

**Construction:** Two pair, solid, tinned or bare copper, insulated with composite insulation layers. Each pair is individually shielded with aluminum/polyester tape (aluminum out) with a solid, tinned copper drain. Each pair is electrically isolated by a polyester tape. Green PVC jacket over both legs with a thin web that may be easily separated. Pair color code per Table G

**Listing/Ratings:** NEC and CEC Type CMR

**Note:** Diameter over insulated conductors 0.039 inch, 1.00 mm

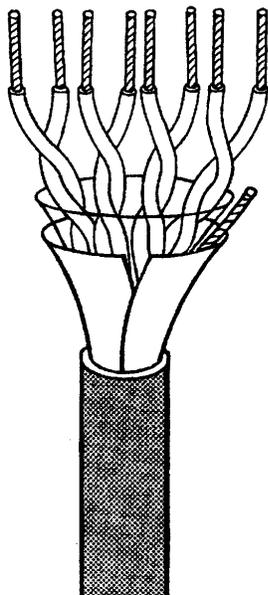

**Application:** Flexible patch/jumper cable to support shielded SF/UTP (braid over foil) Category 5 or 5e networks per TIA/EIA-568-B.2. Also supports ISO 11801 and EN 50173 Class D screened applications. Cables terminate to shielded RJ-45 connectors. Tested to 100 MHz. RoHS compliant

**Construction:** 26 AWG stranded (7/34) tinned copper, insulated with polyolefin and paired. Pairs cabled with clear polyester tape binder. Shielded with aluminum/polyester tape and stranded 26 AWG tinned copper drain wire and 38 AWG tinned copper braid (85% minimum). Jacketed with PVC in colors as listed below. Pair color code per Table G

**Listing/Ratings:** Nom. impedance: 100 ohms  
 Nom. Mutual capacitance at 1 MHz: 13.5 pF/ft  
 NEC (UL) and CEC Type CM  
 DC Resistance 42.6 Ohms/K ft Max.  
 Category 5e compliant  
 Temperature rating 60°C Max.

\*\*This product is available in reel-in-a-box packaging

**Application:**

Horizontal cable that exceeds the requirements of TIA/EIA 568-B.2-1, Category 6. Reduced diameter design without bonded pairs, spline, or other pair-separator provides improved flexibility, installation ease and less tray/pathway fill. Also used for non-flexing cord applications. Supports 10Base-T, 100Base-T, 1000Base-T, ATM and future applications beyond Gigabit Ethernet. Contact Quabbin for RoHS information

**Construction:**

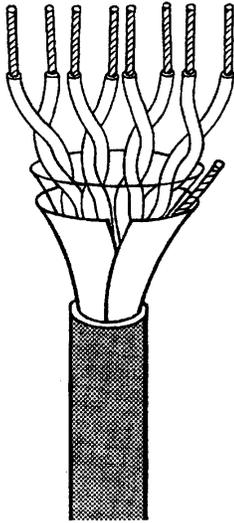

24 AWG solid bare copper, insulated with polyolefin and paired. Four pairs cabled and jacketed with PVC. Construction optimizes attenuation, RL and NEXT performance, providing extended frequency ACR. Jacket colors are listed below. Pair color code per Table G

**Note:** This product is available in reel-in-a-box packaging

**Application:** Shielded F/UTP (foil tape) flexible patch/jumper cable. Supports shielded TIA Category 6 networks and ISO 11801, EN 50173 Class E screened applications. Terminates to high-performance shielded modular plugs (see note below). Tested to 250 MHz. RoHS compliant

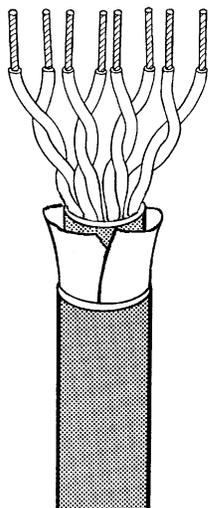

**Construction:** 26 AWG stranded (7/34) tinned copper, insulated with polyolefin and paired. Four pairs are cabled with a spline separator (not shown in drawing), a clear polyester tape, and an overall aluminum/polyester shielding tape with stranded 26 AWG tinned copper drain wire (foil and drain in). Jacketed with PVC. Jacket colors are listed below. Pair color code per Table G

**Listing/Ratings:** NEC Type CM, 75°C, Article 800  
 CEC Type CMG  
 Meets TIA Cat 6 patch cable requirements  
 ETL verification pending  
 DC resistance: 42.6 Ohms/K ft Max.  
 (14 Ohms/100 meters)

\*Consult factory for additional jacket colors

**Note:** Diameter over insulated conductors 0.037 inch, 0.94 mm

**Application:**

Flexible patch/jumper cable designed for networks transmitting 10GBase-T (10 Gigabit Ethernet). Exceeds augmented Cat 6a patch cable requirements enabling 100 meter channels and is backward compatible with Cat 6 and 5e hardware. Minimizes Alien Crosstalk (AXT) noise and terminates to high-performance UTP modular plugs. Tested to 500 MHz. RoHS compliant

**Construction:**

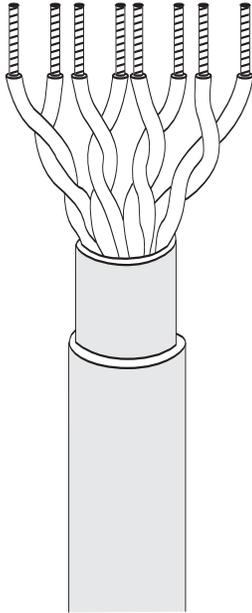

24 AWG stranded (7/32) tinned copper, insulated with polyethylene and paired. Four pairs are cabled and double jacketed. An AXT suppression layer is provided between the dual PVC jackets. Jacket colors are listed below. Pair color code per Table G

## Industrial Ethernet Topology

Most proprietary industrial control systems signal at Kbit rates, thus 10Base-T and 100Base-T Ethernet offer a huge increase in signaling speeds. Ethernet systems used in offices are well accepted, non-proprietary, high-speed, reliable, and easily migrate to even higher speeds. These same benefits are driving Ethernet controls into industrial environments, additionally providing factory-floor data to the enterprise in real time. However, most commercial or office Ethernet hardware cannot survive the rigors of the factory floor. They must be redesigned. Although the signaling protocol is similar, both the cabling media and active gear must be protected from harsh conditions.

The graphic above is a simplified topology diagram that illustrates where Industrial Ethernet (IE) begins and how it interconnects with the existing office infrastructure. The **campus or building** network contains generic connectivity that may include Category 5e and 6 systems with fiber-optic, copper, backbone, horizontal, wiring closets, patch panels and patch cord components. This **generic category cabling** extends to the last **Telecommunications Outlet (TO)**. At that point the office environment ends and the IE environment begins.

Generic cabling in an office is not stressed by the ambient conditions or environment. However, the **apparatus cabling** and everything beyond the **network interface (NI)** point will be exposed to hazards. Exactly what the hazards are depends on the industrial system being controlled. An automotive robotics welding assembly line, a petrochemical refinery, a food processing facility, or a sports stadium present very different hazards; all of which can destroy commercial grade cabling.

## Industrial Control Requirements

Unlike commercial environments, industrial process plants are often reconfigured and there is generally no requirement for a 20-year warranty. Instead, emphasis is placed on **elimination of down-time and system reliability**. When a control system shuts down, an entire plant stops, leading to potential losses of thousands of dollars per minute.

Specifications called "MICE" tables have been written that define **Mechanical, Ingress, Chemical/Climatic, and Electromagnetic** conditions for three different environments.

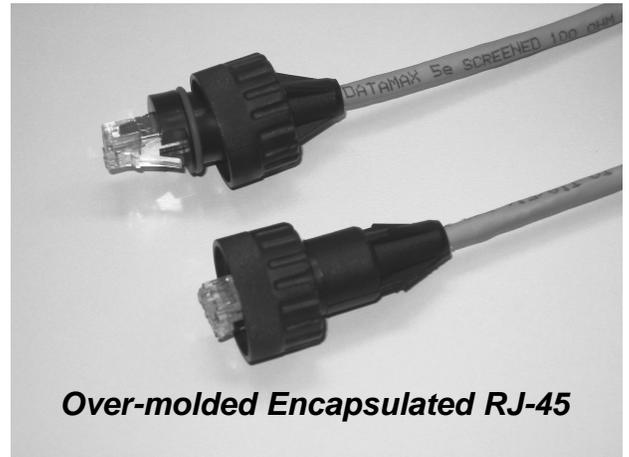

A few of the characteristics defined include:

- Dust and particles
- Water and humidity
- Temperature
- Sunlight and UV
- EMI
- Oils and chemicals
- Vibration and acceleration
- Flexing
- Tear and cut-through

To survive these conditions, small hardened switches or routers with few ports may be bolted to a column close to the control points, patch cords tend to be short, and the wiring closet becomes very small or disappears. Network service, connector termination, and system reconfigurations must be done on the plant floor by electricians, not trained network technicians. Also, since it may be years before IE migrates to 1000Base-T or higher speeds, reliable Category 5e infrastructure is all that is usually needed. Furthermore, since 10Base-T or 100Base-T only use 2-pair of a customary 4-pair cable; **why not use 2-pair connectivity?** This minimizes potential failure points and allows a more reliable connector design.

## Cables and Connectors

Apparatus cabling and cord sets must also be hardened and protected. Assemblies use encapsulated RJ-45 or cylindrical M12 connectors. The 4-pin M12, used for years with industrial control systems, has recently been adapted for Ethernet transmission. Now 8-pin versions will allow both 2-pair and 4-pair UTP cables to be used.

**Over-molded Encapsulated RJ-45**

These connector designs use O-rings, over-molding, and/or sealing gaskets to bond to the cable jackets. These techniques provide a mated connection that resists fluids, dust, vibration, and other hazards, yet often may be field assembled. The ideal designs are IP67 rated, as defined in IEC 60529, assuring resistance to both fluid and dust particle penetration.

#### Mechanical Performance

Polyurethane is the most rugged DataMax Extreme jacket, providing cords with an outstanding balance of properties. They combine superior patch cord electrical performance with polyurethane's outstanding mechanical characteristics.

The polyurethane jacket is **pressure extruded** over the cable core, binding it in place and providing stability during harsh usage such as flexing, vibration, crushing, and impact. The jacket also provides excellent cut-through, tear, and abrasion performance; combined with resistance to weathering, moisture, oils, and many industrial fluids. Comparisons to standard commercial PVC jacketed patch cable are listed below:

- Jacket stabilizes electrical performance
- Low temperature flexibility much better
- Good resistance to humidity and moisture
- Better UV and weathering resistance
- Better flexibility and flex life
- Tensile ~ 4000 psi (~ 2500 psi for PVC)
  - 1-week air oven @ 121 C ~ 3200 psi
  - 1-week air oven @ 140 C ~ 2000 psi
- Elongation ~ 550% (~ 275% for PVC)
- Tear ~ 350 lbs/in (~ 100 lbs/in for PVC)
- Far superior abrasion
- Better oil and petrochemical resistance

#### Electrical Performance

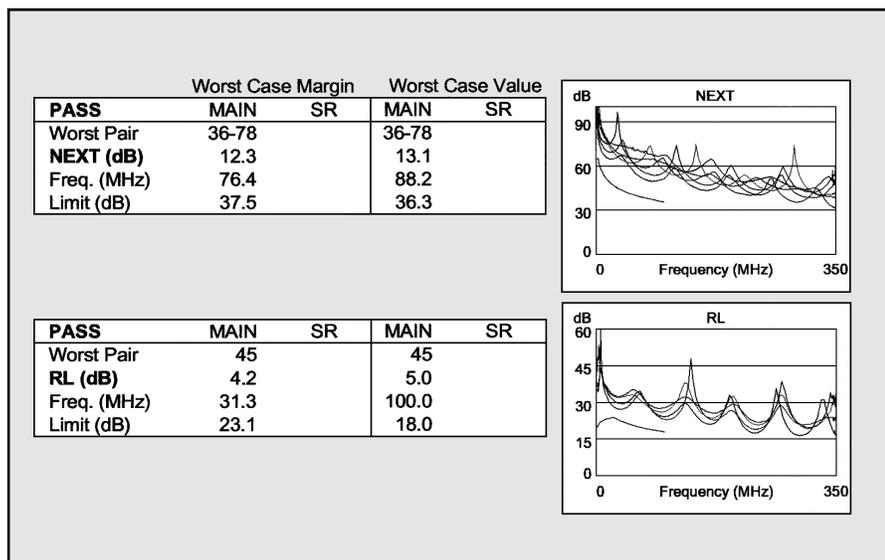

When used as a jacket for unshielded cable, polyurethane does not compromise insertion loss, however unshielded cords exceed TIA/EIA-568-B.2 for Cat 5e up to 70 meters plug-to-plug. Shielded polyurethane cords may be used for plug-to-plug channels up to 80-meters.

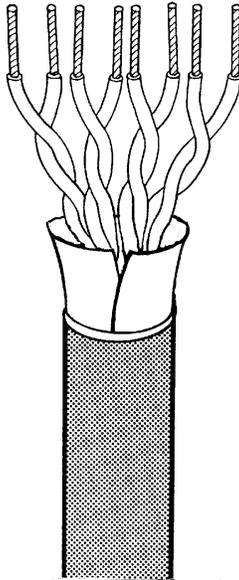

The cords may be terminated with encapsulated modular plugs or M12 connectors. The photo below illustrates a 4-pair polyurethane DataMax Extreme cable terminated with an RJ-45 and molded boot.

The following graphs illustrate typical performance for a 1-meter, 4-pair Polyurethane cord tested using Fluke Networks' DSP 4300 Cable Analyzer.

**Note the huge 12.3dB NEXT margin over Cat 5e requirements**

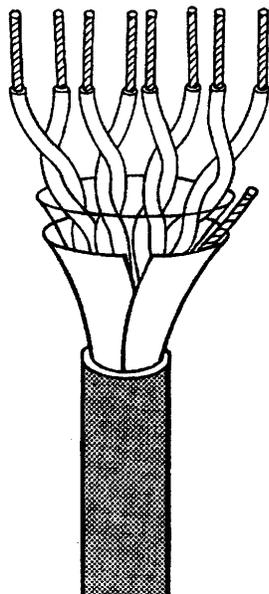

**Application:** Flexible patch/jumper cable for production of durable flame retardant Category 5e Industrial Ethernet cords. Jacket provides excellent mechanical, flex-life, oil resistance, low-temperature flexibility, and aging characteristics compared to PVC. May be terminated with encapsulated RJ-45 or cylindrical M12 connectors to achieve IP-67 rating. RoHS compliant

**Construction:** Stranded tinned copper as listed below, insulated with polyethylene and paired. Multipairs are cabled and jacketed with pressured Polyurethane and a tape separator. Jacket may be over-molded. 4-pair color code per Table G. 2-pair: white/green x green, white/orange x orange

**Listing/Ratings:** Cords exceed TIA/EIA- 568-B.2 Cat 5e NEXT & RL Suitable for 10Base-T or 100Base-T transmission  
 Temperature rating: 75 °C Max., -40 °C Min.  
 22 AWG plug-to-plug Cat 5e channel: > 70 meters  
 Nom. Impedance 1 - 100 MHz: 100 +/- 15 Ohms

### FR-TPE Electrical Features

FR-TPE (Flame Retardant Thermoplastic Elastomer) cables are ideally suited for many hazardous Industrial Ethernet applications. These Industrial Ethernet cables provide the industry's best combination of electrical performance, flex-life, chemical resistance, weld spatter resistance, and easy over-molding. One of the many applications that FR-TPE jacketed cords are suited for is control of robotic arms for automated assembly welding.

Applying FR-TPE as a pressured jacket on Quabbin's DataMax Extreme cable enables the cable to meet the TIA/EIA-568-B.2 requirements for Category 5e bulk cable. Industrial Ethernet apparatus cords properly assembled using this cable comply with Category 5e patch cord requirements using either 24 AWG and 22 AWG constructions. The 22 AWG cords may be used for 100 meter plug to plug channels. The 2-pair designs are suitable for 100Base-T Ethernet transmission and the 4-pair can handle 1000Base-T.

### Connector Compatibility

DataMax Extreme FR-TPE jacketed Industrial Ethernet cables are easily terminated to either encapsulated RJ-45 or cylindrical M12 connectors. The design uses

a single jacket and dimensions that are compatible with standard connectivity. These features, combined with a smooth round jacket, allow pressured over-molding and positive seals to O-rings or gaskets normally used in IP67 rated connections. The best assembly designs are IP67 rated, which assure resistance to both fluid and dust particle penetration as defined in IEC 60529. The combination of the FR-TPE jacket and an IP67 interface resists chemicals, dust, vibration, and other industrial hazards.

### Mechanical Performance

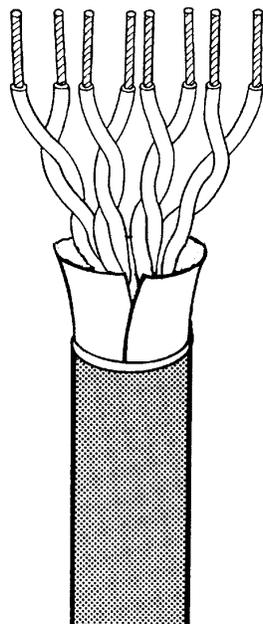

Quabbin's FR-TPE compound has good to excellent mechanical characteristics. A few are listed below:

- Good chemical and ozone resistance
- Excellent flex-life and low temperature flexibility
- Good weld spatter resistance
- Good UV and fire resistance
- Good weathering and aging
- Good tear strength

The photo below illustrates a 2-pair FR-TPE jacketed cable with the jacket stripped to show the pairs and fillers. The photo also shows a cable with the jacket over-molded and terminated to a round 4-pin industrial connector.

**2-Pair FR-TPE jacketed cable stripped to show construction details and over-molded round industrial 4-pin connector**

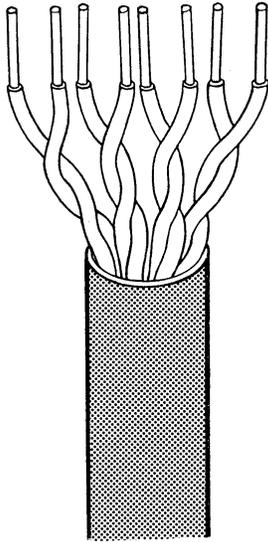

**Application:** Flexible patch/jumper cable for production of Category 5e Industrial Ethernet cords with exceptional flex-life. Jacket provides good mechanical and chemical resistance, fire, UV, and low temperature performance. May be terminated with encapsulated RJ-45 or cylindrical M12 connectors to achieve IP-67 rating. RoHS compliant

**Construction:** Stranded tinned copper as listed below, insulated with polyethylene and paired. Multipairs are cabled and jacketed with a pressured flame retardant thermoplastic elastomer compound and a tape separator. Jacket may be over-molded. 4-pair color code per Table G. 2-pair white/green x green, white/orange x orange

**Listing/Ratings:** Suitable for 100Base-T transmission or 1Gig E (4-pr)

**Introduction**

High speed Industrial Ethernet (IE) is replacing proprietary Kbit/sec protocols for factory and other industrial control applications. These IE systems must be very reliable and survive hazards that will quickly destroy cabling designed for a commercial network.

Because no single cable design will be “best” for every installation, Quabbin Wire has created a family of DataMax Extreme cable jackets, each with different properties. Industrial-Grade PVC is one of those options.

**Industrial-Grade PVC**

There are hundreds of different polyvinylchloride (PVC) compounds used for jacketing electrical cables. All are designed to optimize a few properties such as mechanical performance, cost, low-temperature flexibility, sunlight resistance, or aging. Since commercial LAN cables are used in protected environments, their PVC jacket compounds typically optimize manufacturing efficiency, electrical performance, and cost.

Quabbin’s Industrial-Grade PVC jacket will survive many of the industrial hazards that commercial PVCs will not. Compared to Quabbin’s other IE jacket options, this material has the lowest cost, excellent flame/fire resistance, good resistance to petrochemical oils, ozone, and bases.

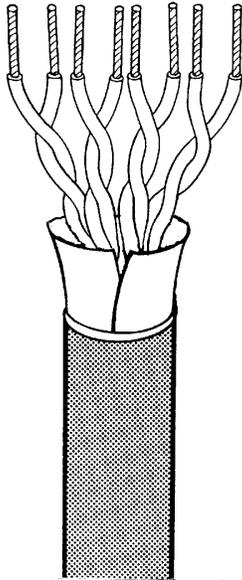

Like the other DataMax Extreme jackets, Industrial-Grade PVC is pressure extruded over the cable core, locking the pairs in place, providing very stable Category 5e performance, even when mechanically abused. The smooth round jacket is easily terminated to using connectors with O-rings, sealing gaskets, or over-molding. These cables are available in a variety of jacket colors, conductor sizes, in 2-pair and 4-pair designs, and either shielded or unshielded.

**Jacket Comparison Information**

The table below provides comparison information for the three jacketing compounds currently offered by Quabbin for their IE product line. Since no jacket is “best” for all applications, Quabbin’s Sales Service Department will help you determine the proper construction for your project.

Performance Criteria	Polyurethane	FR-TPE	Industrial-PVC
Low Cost Construction	Fair	Good	Excellent
RoHS Compliant and Lead Free	Yes	Yes	Yes
Dielectric Strength and Electrical Performance	Fair	Good	Good
Low Temperature Flexibility and Brittle Point	Excellent	Excellent	Fair
Tear Resistance	Excellent	Good	Fair
Abrasion and Scuff Resistance	Excellent	Good	Good
Flexibility and Flex-Life *	Excellent	Excellent	Fair
Tensile Strength and Toughness	Excellent	Good	Good
Resistance to Ozone	Good	Good	Excellent
Ultraviolet and Weather Resistance	Good	Good	Fair
Resistance to Acids	Fair	Good	Fair
Resistance to Bases	Good	Good	Good
Resistance to Moisture	Excellent	Excellent	Good
Resistance to Petrochemicals	Fair	Fair	Good
Flame and Fire Resistance	Fair	Good	Excellent

### Flexibility and Flex-life

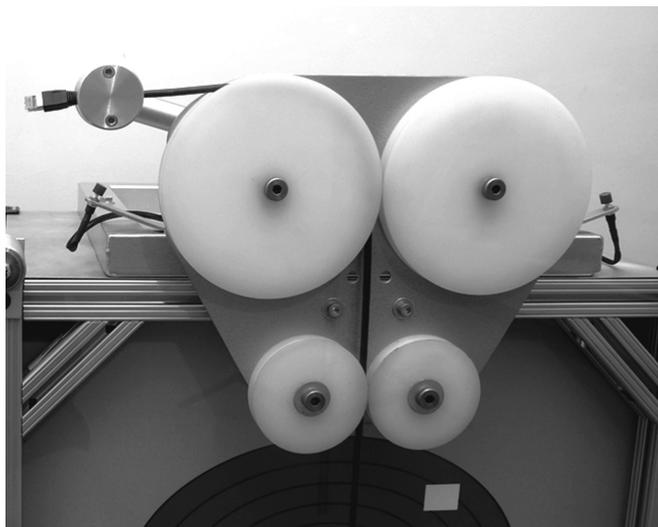

All cables must be flexible enough to withstand the bending and stresses of installation. However, many Industrial Ethernet cables continuously operate in applications that require both flexibility and extended flex-life. For example, cables in robotic applications must be both flexible and have a very long flex-life. These cables must reliably transmit error-free Ethernet signals for millions of bend cycles.

Quabbin Wire's entire family of DataMax Extreme cables have pressured overall jackets that lock the high-performance pairs into relative alignment, assuring reliable Ethernet transmission when the cables are bent, flexed, or moderately abused. Combining the pressured jacket design with Quabbin's Flame Retardant Thermoplastic Elastomer (FR-TPE) and Polyurethane jacketed constructions provide exceptional flexibility and flex-life performance.

### Two Types of Bending

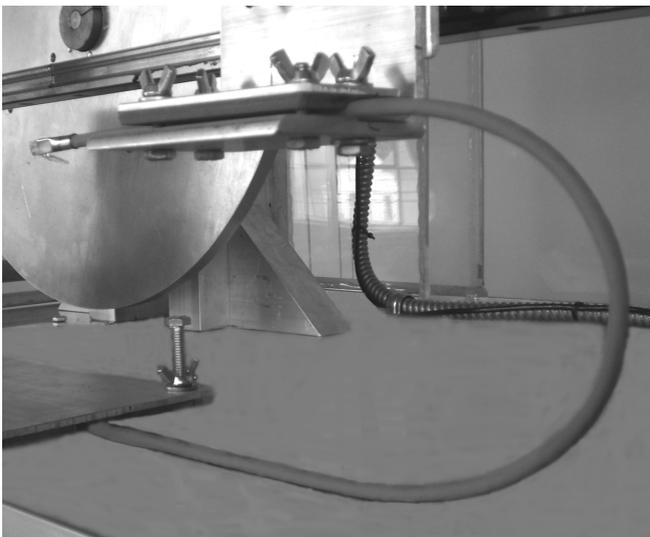

Industrial flexing applications usually bend the cable repeatedly at one point along its length, or the bending may be distributed along the cable's length. This latter case is typical of a "C-Track" or rolling-bend installation. The former is referred to as a "Tic-Toc" test because of the similarity between the moving test arm and a clock's pendulum.

The photo below illustrates a "Tic-Toc" test that repeatedly bends a cable or cord at the same point. The arm at the upper left is shown bending a 4-pair shielded

polyurethane patch cord (Quabbin P/N 5730) back and forth 180 degrees over 6 inch mandrels. The lower end of the cord is attached to a 1 pound weight to add tension and constrain the cable. The test subjects the cord to approximately one million cycles per month and is continued to cord failure. *At the time of this photo (September 2008) the patch cord had survived 10 million cycles yet continued to meet TIA Category 6 Ethernet transmission requirements!*

The photo below illustrates a rolling-bend test fixture that bends the cable or cord along its length. The bottom end of the cable is fixed while the top is repeatedly moved through a 9 inch stroke at 120,000 cycles

per day. Patch cords assembled using 2-pair and 4-pair unshielded FR-TPE jacketed cable (P/Ns 5770 and 5750 respectively) have been tested to 1 million cycles with a 4.5 inch radius bend and to 10 million cycles with an 8 inch radius bend. In both cases, electrical performance testing was performed while the cords cycled through the full range of movement. Moving the cords while testing eliminates the potential for false positive results that could occur when testing a stationary cord with a broken conductor. *All cords passed TIA Category 6 requirements both during and at the conclusion of the tests!*

Contact Quabbin Wire's engineering department for more detailed flex-life data and test reports on DataMax Extreme Industrial Ethernet cables.

Composite Design for Truck-Stops	10-F

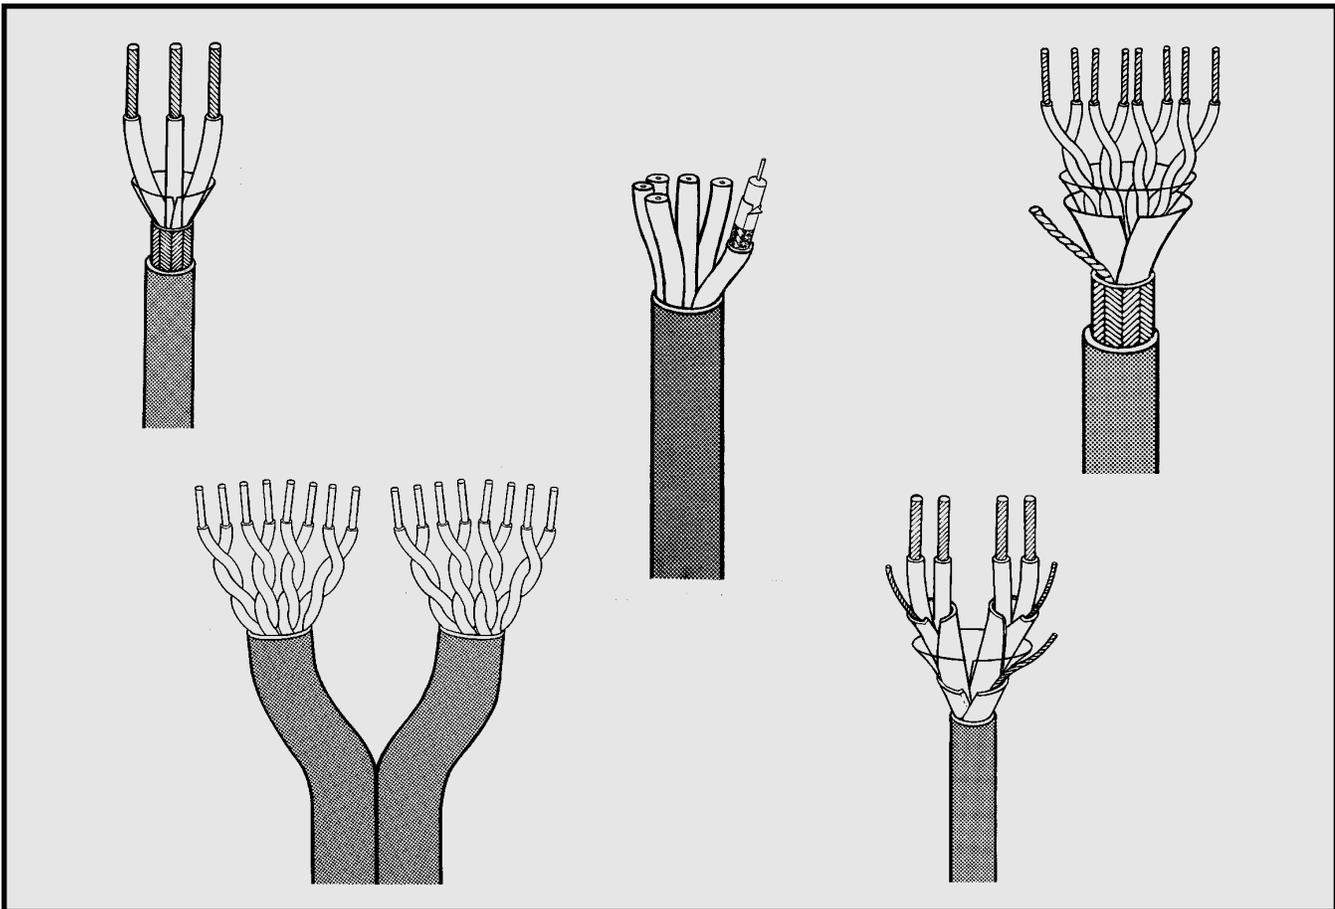

Quabbin Wire & Cable Co., Inc is well known as a stocking manufacturer of low voltage electronic and data transmission cables; however, we also have the capability to produce custom or special designs. We have thousands of designs on file, ranging from special hook-up wires to exotic composite cables. This section of the catalog illustrates a few of these special constructions that Quabbin has designed and produced for unusual applications.

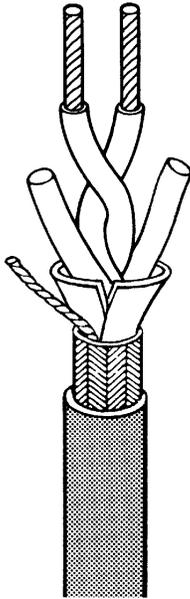

Quabbin Wire can provide a preliminary design and quotation in 1 –2 working days. If there is further interest, a formal design specification is submitted for customer review, and manufacture of the cable begins promptly after the design has been approved. Our design staff can work from an existing cable sample, a performance specification, or they can talk you through your design requirements.

Our unique “Integra-Design” process enables Quabbin to quickly respond at either the OEM equipment or system level. This is a paperless procedure that fully integrates the design of the cable and the development of the manufacturing process.

Engineering also uses a custom finite element design package that is especially useful for exotic constructions that must operate at high frequencies or with other controlled electronic parameters. This process provides quick prototype delivery if required, and a smooth transition to full-scale production without compromising the design. It also eliminates many design iterations usually needed to develop the proper cable.

Last, Quabbin often provides design/specification protection by using a unique part number. Think of Quabbin for your next custom cable design or when you have an unusual cable requirement.

**Application:** Broadcast, Industrial Databus and Computer Interconnect Cable. RoHS compliant

**Construction:** 20 AWG stranded tinned copper as listed below, insulated with polyethylene and paired with poly rod fillers. Shielded with overall aluminum/polyester tape, 22 AWG stranded tinned copper drain wire, and tinned copper braid. Blue PVC jacket. Other jacket colors available.

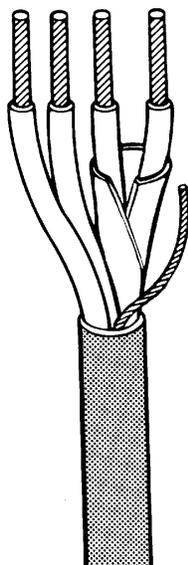

**Listing/Ratings:** NEC Type CM 75°, Article 800  
 Velocity of propagation: 66%  
 Nominal impedance: 78 ohms  
 CEC Type CMG\*

Part Number	Strand	Insulation Thickness		Jacket Thickness		Nominal Diameter		Min. Braid Cover	Nom. Mutual Cap. pF/ft	1M' Weight Lbs.

**Color Code:** blue paired with clear

\*Quabbin may substitute CSA Type CMG or C(UL) in the future

# SPECIAL CONSTRUCTIONS PAIR SHIELDED 20 & 22 AWG

**Application:** Audio and Communication Interconnect Cable.  
RoHs compliant.

**Construction:** Stranded tinned copper as listed below, insulated with PVC or polyethylene and paired. Red and black pair shielded with aluminum/polyester tape and stranded tinned copper drain wire. Two pairs cabled (see note below) and jacketed with chrome gray PVC.

**Listing/Ratings:** Mfr's Suggested Working Voltage:  
P/N 7460 - 200 Volt  
P/N 7465 - 200 Volt (AWM Style 2725)  
P/N 6185 - 350 Volt  
(UL) NEC Type CM, Article 800  
CSA as listed below

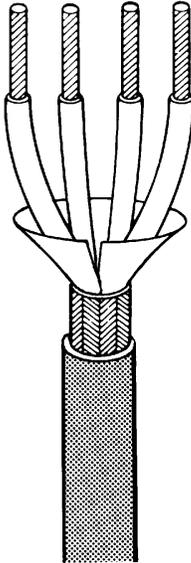

Part Number	AWG Strand	Insul.	Drain Wire AWG	Insulation Thickness		Jacket Thickness		Nominal Diameter		Nom. Cap. pF/ft		CSA Type	1M' Pkg Weight Lbs.
				inch	mm	inch	mm	inch	mm	a	b

6185	20 7/28	PVC	22	.015	.38	.028	.71	.218	5.54	60	99	AWM	34

**a** = Capacitance between conductors.

**b** = Capacitance between 1 conductor and other conductors connected to shield.

Color Code: black x red shielded pair  
green x white other pair

**Note:** Part numbers 7465 and 6185 are cabled on a common axis to reduce finished diameter.

**Application:** Opposite conductors connected together and used as two conductor cable for low induced noise audio and music transmission. Also used as 4/C for MIDI applications. Contact Quabbin for RoHS information

**Construction:** 24 AWG (42/40) stranded bare copper as listed below, insulated with polyethylene. Four conductors cabled and shielded with overall 95% coverage tinned copper braid. Jacketed with matte finished PVC. Conductor color code listed below.

**Listing/Ratings:** Mfr's Suggested Working Voltage: 100 Volt

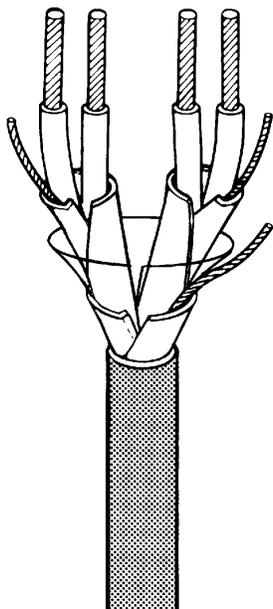

Part Number	Jacket Color	Insulation Thickness		Jacket Thickness		Nominal Diameter		Nom. Cap. pF/ft		Color Code*	1M' Pkg. Weight Lbs.
		inch	mm	inch	mm	inch	mm	a	b

**a** = Capacitance between 2 blue conductors tied together and 2 white conductors tied together.

**b** = Capacitance between 2 like-colored conductors and other conductors connected to shield.

**Note:** One blue and one white conductor striped for identification when used as 4/C cable.

## SPECIAL CONSTRUCTIONS PAIRS AND OVERALL SHIELDED 22 AWG

**Application:** Audio and Communication Interconnect Cable.  
RoHS compliant

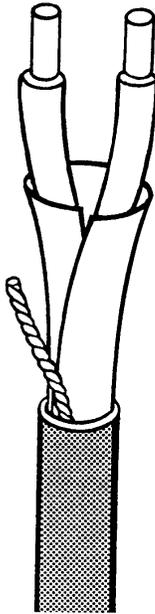

**Construction:** 22 AWG (7/30) stranded tinned copper insulated with polypropylene and paired. Each pair with individual 24 AWG stranded tinned copper drain wire and tape shield. Pairs cabled on a common axis to reduce cable diameter, and shielded with overall aluminum/polyester tape and 24 AWG stranded tinned copper drain wire. All three shields isolated from each other. Chrome gray PVC jacket

**Listing/Ratings:** (UL) AWM Style 20093, 150 Volt 60°C  
NEC Type CM, Article 800

Part Number	No. of Pairs	Insulation Thickness		Jacket Thickness		Nominal Diameter		Nom. Cap. pF/ft		Color Code	1M' Pkg. Weight Lbs.
		inch	mm	inch	mm	inch	mm	a	b		
7455	2	.010	.25	.030	.76	.200	5.08	35	62	Blk/Red Grn/Wht	29

**a** = Capacitance between conductors.

**b** = Capacitance between 1 conductor and other conductors connected to shield.

**Application:** Transmission of one or two digital audio channels with sampling rates and bandwidth per AES/EBU (Audio Engineering Society/European Broadcast Union) specifications. Shield tape is bonded to cable jacket for easy cable termination. RoHS compliant

**Construction:** 24 AWG solid tinned copper insulated with foamed polypropylene and paired. Conductor color code Black and White. Shielded with aluminum vinyl tape bonded to jacket and solid 24 AWG tinned copper drain wire inside tape layer. PVC jacket with colors as listed below

**Listing/Ratings:** Temperature rating 60°C Max.  
 Mutual capacitance 13 pF/ft.  
 Grounded capacitance 23 pF/ft.  
 Voltage rating 300 Volts Max.  
 Impedance 110 Ohms Nom.  
 DC resistance 27.2 Ohms/K ft.  
 Attenuation: @ 3 MHz 1.29 dB/100 ft.  
                   @ 6 MHz 1.65 dB/100 ft.

- B Equals barrel diameter (inches)  
 T Equals reel traverse (inches)  
 U Equals unused portion of flange (inches)  
 H Equals used portion of flange (inches)

### How To Determine Spool or Reel Capacity

To calculate the approximate maximum cable length in feet that may be wound onto a given sized reel or spool, you must know the cable's diameter and determine the above reel dimensions. All dimensions must be in inches. Dimensions for shipping reels normally used by Quabbin Wire are listed in the table below.

Shipping Reels (Diameter")	U (inch)	H (inch)	B (inch)	T (inch)	Reel Factor
Plastic 10.5"	0.5	2.75	3.50	7.00	31.52
Plastic 10.5" (in box)	0.5	2.75	3.5	10.00	45.03
Plastic 12"	0.5	3.00	5.00	7.00	44.02
Plastic 12" (in box)	0.5	2.5	6.0	10.0	55.68
Plywood 12"	0.5	3.25	4.00	7.00	43.21
Plywood 14"	0.5	3.75	4.80	9.00	75.60
Plywood 16"	0.75	4.50	4.80	8.75	95.94
Plywood 20"	1.0	5.00	7.80	12.25	205.41
Plywood 24"	1.0	5.75	10.00	12.25	290.66
Plywood 30"	1.5	8.50	10.00	14.00	576.79
Wood 36"	1.5	10.25	11.80	18.00	1065.87
Wood 40"	1.5	12.00	11.75	17.75	1325.39

The "Reel or Spool Factor" for a given reel is calculated using the following equation:

$$\text{Factor} = (H + B) \times (H) \times (T) \times (0.262)$$

You may now calculate the approximate maximum length of cable in feet that will fit on that reel, by dividing the reel factor by the diameter of the cable (inches) squared.

$$\text{Length of Cable (ft)} = \text{Reel Factor} / (\text{Cable Diameter})^2$$
